User/Installer Responsibilities

It is important to understand that the existence of this document alone does not automatically constitute authority to install the aircraft engine/propeller/article. Where the user/installer performs work in accordance with the national regulations of an airworthiness authority different than the airworthiness authority of the country specified in block 1, it is essential that the user/installer ensures that his/her airworthiness authority accepts aircraft engine(s)/propeller(s)/article(s) from the airworthiness authority of the country specified in block 1. Statements in block 13a and 14a do not constitute installation certification. In all cases, aircraft maintenance records must contain an installation certification issued in accordance with the national regulations by the user/installer before the aircraft may be flown.

Century 41 Autopilot Inop in Heading & Nav Modes. Ramp testing verfied problem.
Opened Tail to Access remote computer to ohm wires between DG & computer.
Removed connectors from computer & DG. Ohmed out wires to find DG signal
from CD-175 pin 17 on DG does not connect to CD-184 pin 41 IAW with Century
drawings. Removed back shells from connectors & found 2 defective wires on DG.
Removed crimp pins & installed new ones. Now testing finds Autopilot fully ops.
While AP operating noticed pitch had slop in control when going from up to down.
Removed access panel at ELT to check bridle cable tension on pitch servo. Tested
to find it is very low at 10 lbs. Should be 17 + or - 2. Could not access bridle clamps
through inspection hole. Had to remove Battery, Battery Box, & C-41 Computer to
Get in to set. Reset Pitch Bridle Cable tension to 18 lbs. Reinstalled Computer, Battery & Battery Box
Testing now finds fully operational.
Also # 2 Nav VIR-351 P/N 622-2080-011 S/N 34399 Missing Digit. Removed & replaced Digits on bench.
Reassembled & Final tested all To Man. Specs.
Reinstalled in Aircraft & ramp tested all fully operational.

Work Order Number: 15737 Date: 03/APR/2015

I certify all work done to the aircraft and /or component identified above was done in accordance with current regulations of the Federal Aviation Administration and was found approved for return to service with respect to the work performed. Details on file under shop order on date listed above.

Aircraft has been stripped, etched, alodined and painted. Flight Controls were static balanced checked and reinstalled. Removed seats, interior side panels, carpeting, side panels, headliner and all interior plastic trim. Recovered and reinstalled all of the above using material conforming to FAR 25 (see flammability certificates attached to this log). Removed and reinstalled seat belts and shoulder harnesses after rewebbing by Aviation Safety Products (see forms 8130-3 attached to this log). All work performed IAW Piper Maintenance Manual.

Modified aircraft per STC SA01875WI by removing 7th seat which changes type design for basic Med 6-place occupancy restriction. Modified I/A/W instructions document No. 17-008-AE3301 and master data list dated 6/12/2019. No weight and balance change due to aircraft produced with only six seats. Inserted flight supplement: Aeronautix document 17-008-FT2901 into POH.
